11 (13-027-1998) The End of the E. Coll Genome Project at the University of Wisconsin-Madison (Frederick R. Blattner, director). Supported by NIH grants HG00301 and HG01428 (from the Human Genome Project and NCHER). The entire sequence was independently determined from E. Coll KN1 strain MG1655. Predicted open reading frames were determined using GeneMark software, kindly supplied by Mark Borodovsky, Georgia Institute of Technology, Alianta, GA, 30332 [e-mail: mark@amber.gatech.edu]. Open reading frames that have been correlated with genetic loci are being annotated with CG site Nos. unique ID nos. for the genes in the E. Coll Genetic Stock Center (CGSC) database at Yale University, kindly supplied by Mary Berlyn. A public version of the database is accessible (http://cgsc.biology.yale.edu). Annotation of the genome is an ongoing task whose goal is to make the genome sequence more useful dance between the E. Coll content of the database is an ongoing task whose goal is to make the genome sequence more useful dance between the E. Coll content of the database is an ongoing task whose goal is comments to the authors are dependent to the database is an ongoing task whose goal is comments to the authors are dependent of the database is an ongoing task whose goal is comments to the authors are

(http://www.genetics.wisc.edu). *** The E. coli K12 sequence and
its annotations are periodically updated; this is version M54. No
sequence changes. Annotation updates: updated gene identifications
and products; all new functional assignments courtesy of Monica
Riley; added promoters, protein binding sites, and repeated
sequences described in reference I. The unique numeric identifiers
beginning with a lowercase 'b' assigned to each gene (protein or
RNA-encoding) are now designated as gene synonyms instead of
labels. This should allow them to be searched for in Entrez as gene
                                                                                                                                                                                                                                                           1 (bases 1 to 13840)

This sequence was determined as part of the E. coll Genome Project (Frederick R. Blattner, director) at the University of Misconsin-Madison. Supported by award HG00301 from the NIH Human Genome Project. A preliminary report was presented at the Small Genomes meeting, March 28-30 1993, Paris, France. The entire sequence was independently determined from E. coll MG1655, overlaps and conflicts with other sequence determinations are annotated. The start of this entry overlaps the end of the entry ECOUW85U (M87049) by the three bases of an ECORI half-site. Data kindly submitted in Guy Plunkett III
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                /traislation="MIPLLAPAAWSGTGKTTLLKKLIPALCARGIRPGLIKHTHHDWD
